Genius Installation Checklist

Installation date _____ / _____ / 2018

Customer order number _____

Customer name _____

↓1

Installation	Manual Page
✔ Read through this checklist	
◯ Install the Genius Hub	2
◯ Install Boiler Receiver Unit(s) & ensure there is always power to the unit(s)	4
◯ Install the Thermostats	10
◯ Install the Underfloor Receiver Units & ensure there is always power to the units (if any)	12
◯ Install the Electric Switches & ensure there is always power to the units (if any)	15
◯ Place Smart Plugs around the house (Think about even spacing of plugs throughout house with only 1 solid wall between each plug and the next plug or furthest Valve)	18
◯ Install devices in into rooms – The Radiator Valves MUST be in mount mode	19 & 22
◯ Log onto the app	24
◯ Test the system	26

↓2

Testing the system
◯ Override one room to 28°C on App
◯ Check the Heating light on Single / Dual channel receiver is green and Boiler fires
◯ Wait 10 minutes then check each radiator is COLD not HOT! (Except for the boosted room). Also check the radiator in & out pipes. (This confirms that Valves are properly seated on the radiators)
◯ Override Whole House to 28°C on App (Click Override in 'Whole House' and select all of the rooms)
◯ Wait 10 minutes then check each radiator shows 28°C on the Valve
◯ Cancel Whole House override
Only if this system has hot water control:
◯ Override Hot Water
◯ Check the Hot Water light on Single / Dual channel receiver is green and Boiler fires
◯ Ensure hot water is flowing to the hot water tank
◯ Cancel Hot Water override

For the customer
◯ Customer registers Hub
◯ Leave spare Valve collars, hex keys, sensor sticky pads & any removed programmers, thermostats and TRV heads with the customer.
