Quick Setup Guide

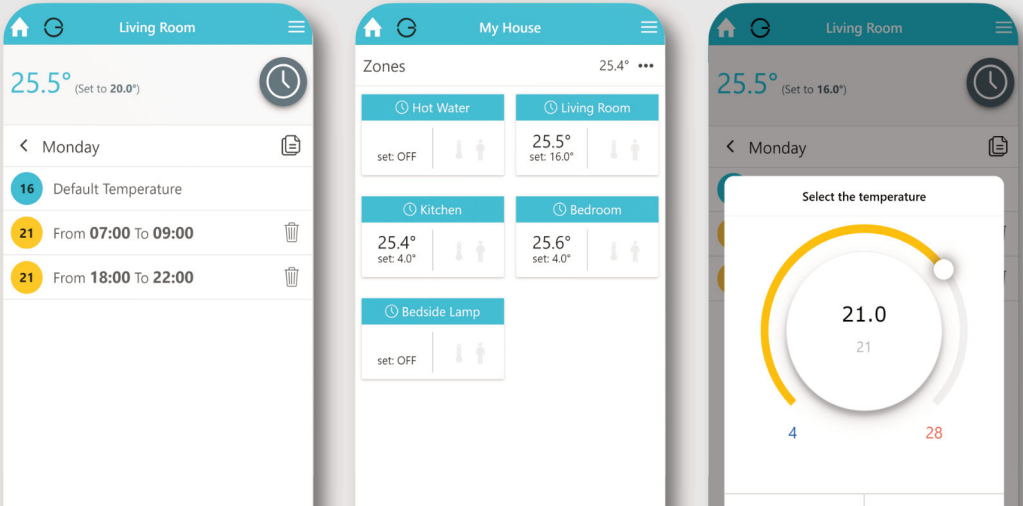
Download the
Genius Hub App

Available on Apple & Android

22.5

Welcome to Genius Hub

Genius Hub helps you reduce your property's energy consumption by only heating the parts of the building that are being used. By controlling the heating in each individual room and learning the best schedule automatically, it helps save money and energy whilst keeping the building occupants comfortable

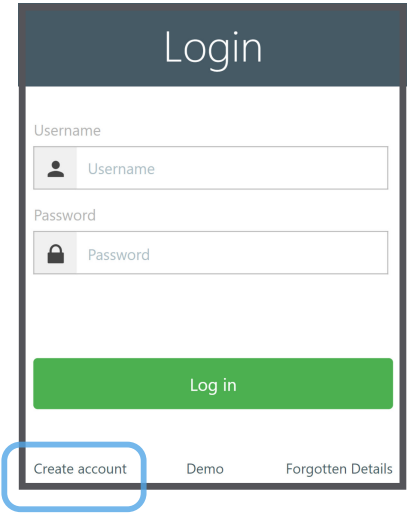


How to register

To secure your system and to choose a memorable username and password, you need to register your system. To register the system:

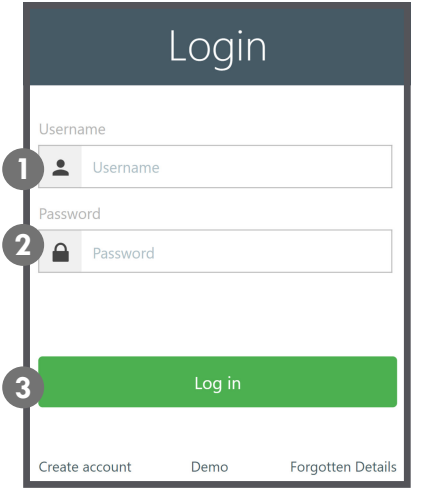
- On the Welcome Page, click on '**Create Account**'
- On the new page, fill in the requested details:
- Enter the username you would like to use with the system and the password to secure your system
- Enter your contact details
- Select the location of your system

NOTE: These fields are case sensitive, so be careful when entering your login details especially on a mobile device where it may auto-capitalise your typing.



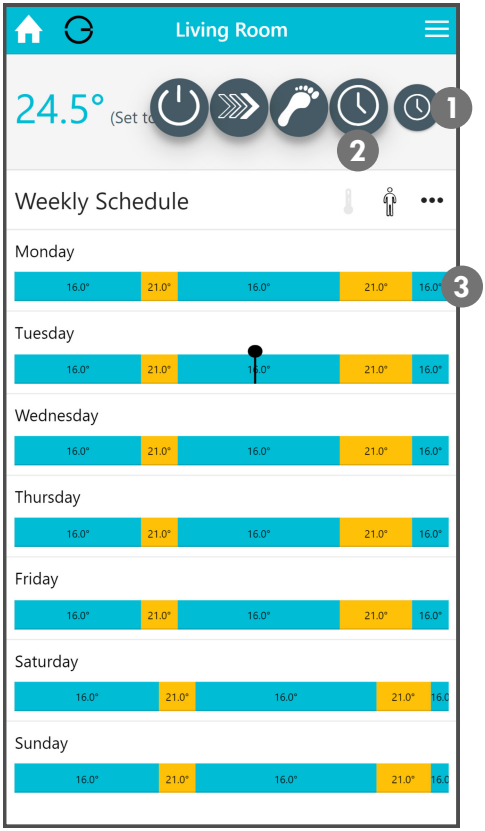
How to login

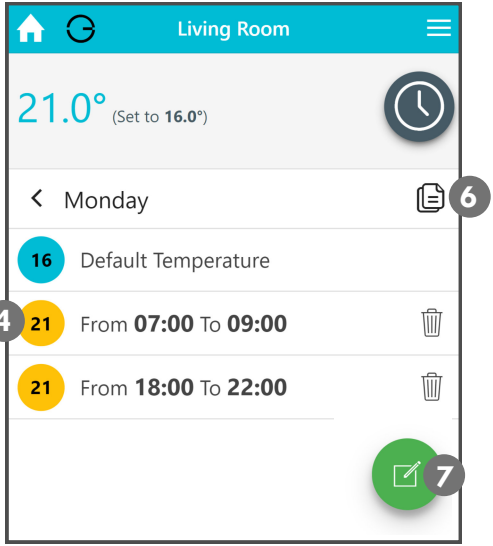
1. Enter your **Username**
2. Enter your **Password**
3. Click **Log in** at the bottom



On a mobile device (such as a smart phone, iPad or tablet), you can download the Genius Hub app from the Apple App store or Android Play store. To access Genius Hub via browser, enter www.geniushub.co.uk/app

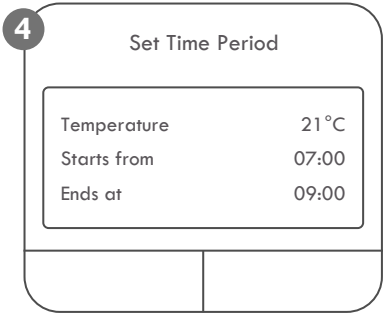
Timer Mode



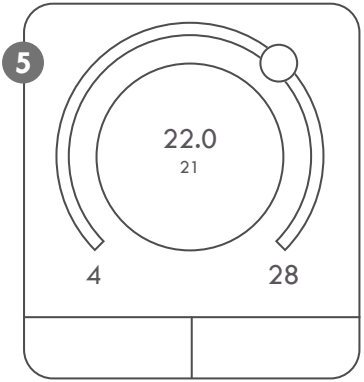


For further info, please see our How to get help (Page 13)

Editing the Time Period

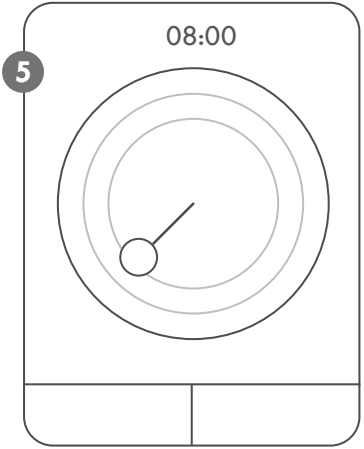


Set Temperature

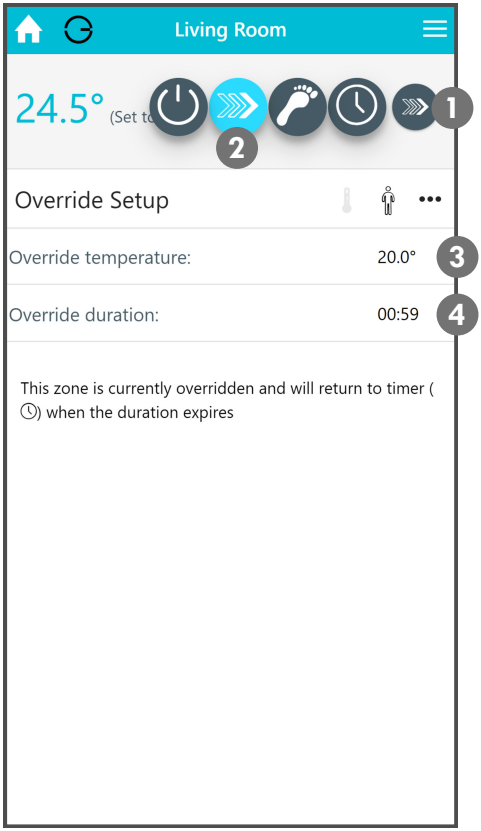


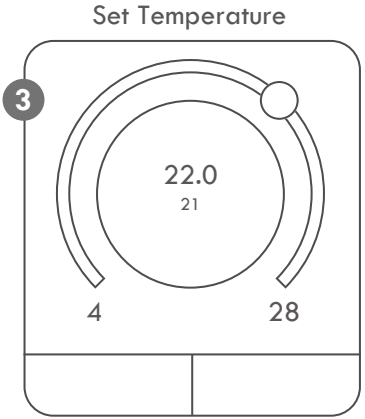
1. Click on the mode icon
2. Click on **Timer Mode**
3. The room will now follow the heating schedule set up for that room. You can edit by clicking on the day
4. Select a time period
5. Select a temperature and a start/end time period
6. A schedule can be copied to multiple days
7. Additional periods can be added

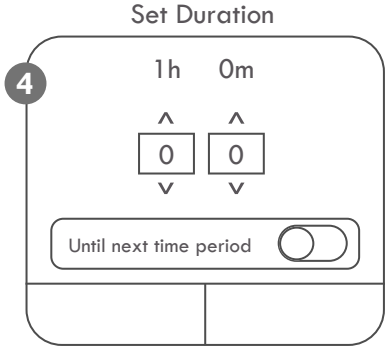
Set Time Period



Override Mode

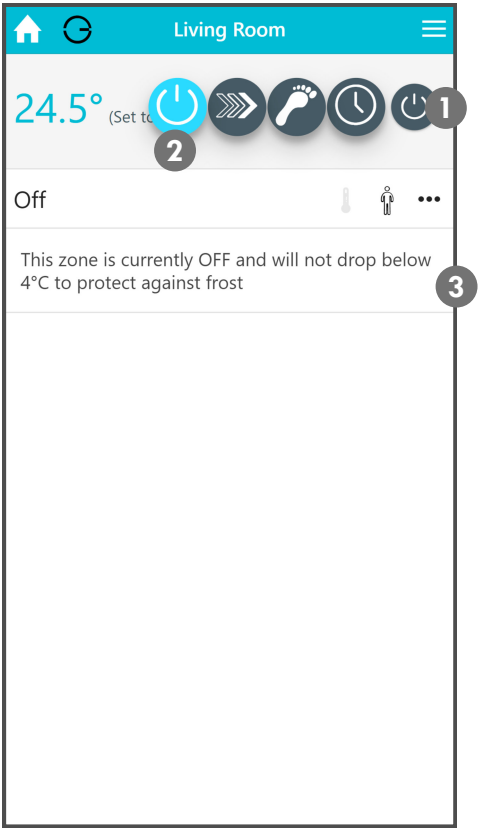






1. Click on the mode icon
2. Click on **Override Mode**
3. Select a Temperature
4. Select the Duration

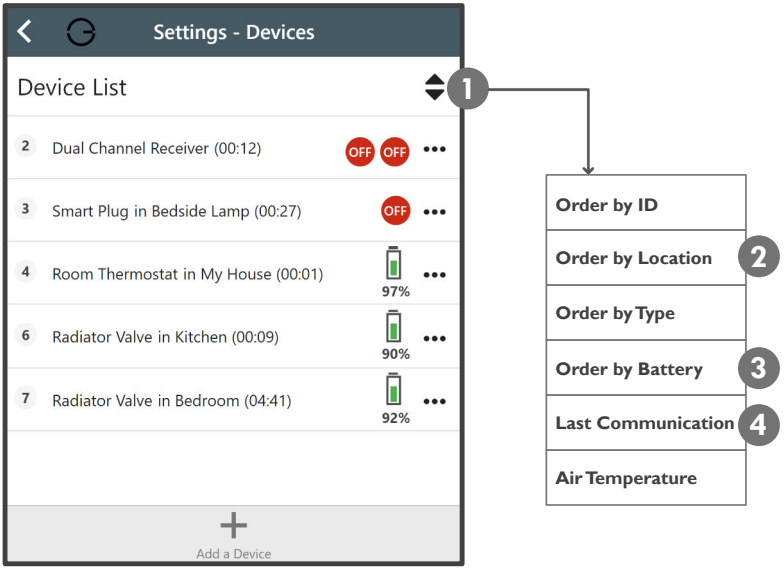
Off Mode



1. Click on the mode icon
2. Click on **Off Mode**
3. The room will now heat only to protect against frost

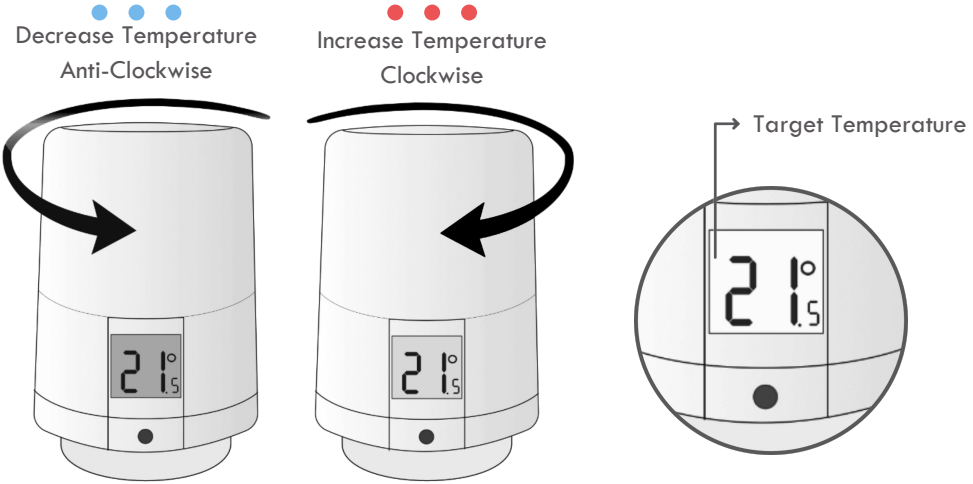
Devices Page

This section lets you check each device's battery level and last communication time.
(Main Menu > Settings > Devices Page)



1. Order Devices by clicking the up/down arrow
2. **Location:** To check if any devices are missing
3. **Battery:** To check which batteries need replacing
4. **Last Communication:** To check which devices have stopped communicating

Manual Override - Radiator Valve



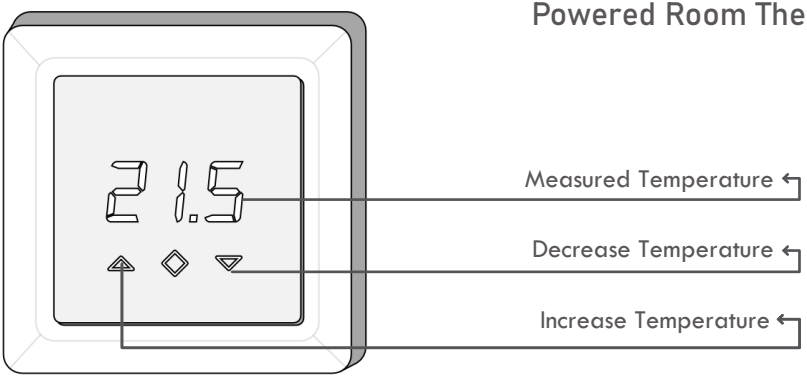
Your radiator will maintain the room temperature you have set on the valve. Once the room reaches the temperature, the radiator will switch off. If there are multiple Radiator Valves in the same room, only one device in the room should be overridden

The radiator will turn back on automatically if the room drops below the room target temperature. The room will return to the previous mode once the override expires

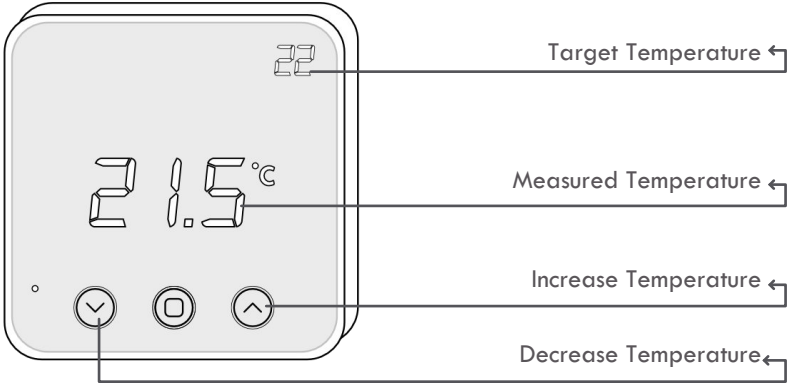
NOTE: In the first 3 weeks the valve is learning how to heat the room efficiently. If you turn the dial manually it will not learn on this occasion and it will heat the room faster

Manual Override - Room Thermostats

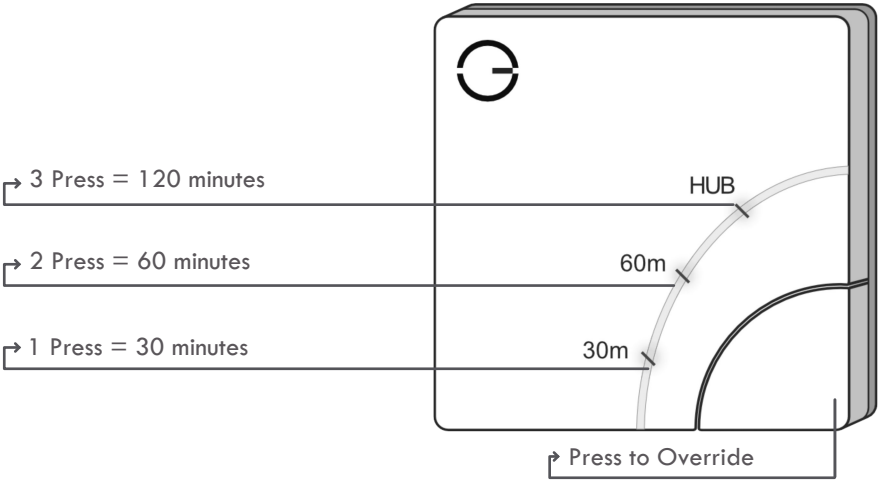
Powered Room Thermostat



Wireless Room Thermostat



Manual Override - Electric Switch



When the Electric Switch is controlled by the app - only one light will appear next to the HUB light
