

WHY SMART CONTROLS WITH GENIUS HUB?

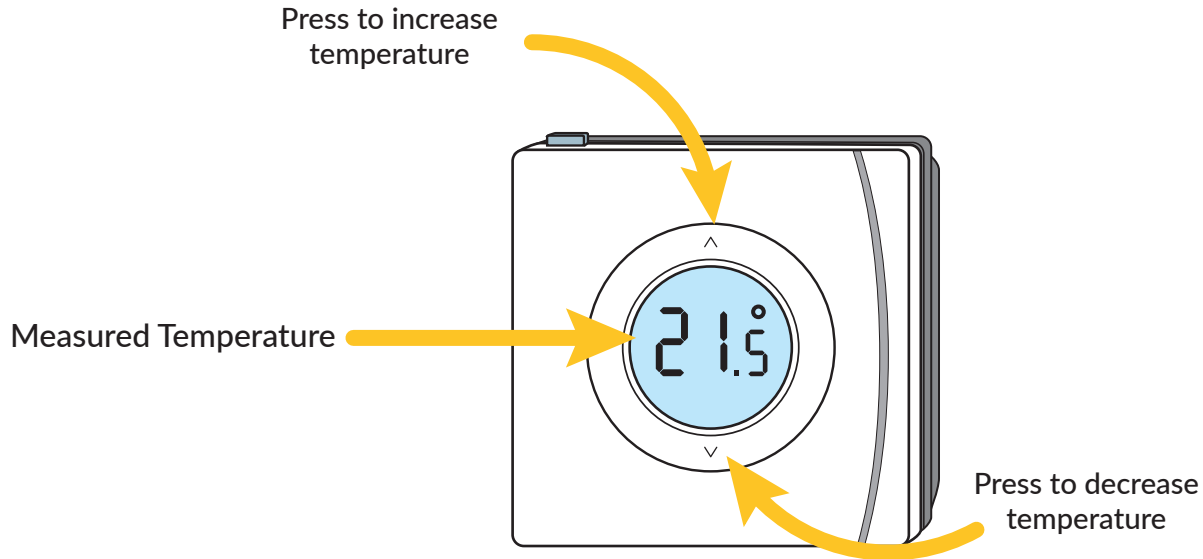

- Control from anywhere using an Android/iOS app or web browser
- Save energy by only heating the rooms you are using
- Pre-heat will switch the radiators on earlier when it's colder outside, later when it's milder outside and is optimised to work with radiators
- Control radiators, underfloor heating and electric heating from one place
- Adjust the temperature from the radiators or app
- Designed for larger properties, for better control and to save money

MANUAL OVERRIDE - GENIUS RADIATOR VALVE

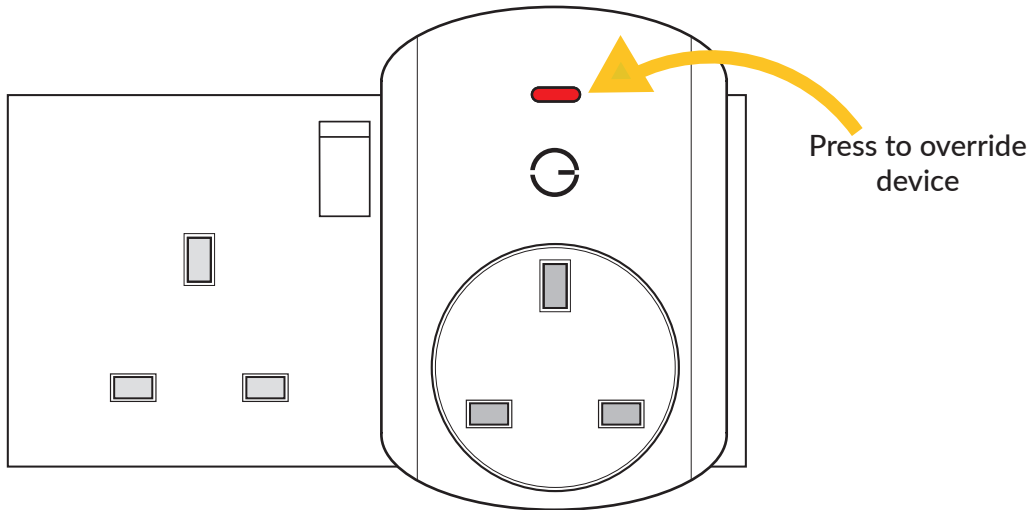

Your radiator will maintain the room temperature you have set on the valve. Once the room reaches the temperature, the radiator will switch off. The radiator will turn back on automatically when the room drops below the room target temperature.

💡 MANUAL OVERRIDE - GENIUS ROOM THERMOSTAT

The Genius Room Thermostat is a sleek and stylish thermostat which provides both accurate temperature feedback for the room it is placed in, and manual control of the temperature for that room, using the simple buttons on the front of it to change the target temperature for the room.

💡 MANUAL OVERRIDE - SMART PLUG

This small, multifunction plug/socket will boost the signal in the property for all of the Genius Hub equipment. Each Genius Hub system will need a number of Smart Plugs to make the system work reliably. Smart Plugs can also be scheduled to turn the front socket on and off from the app.
